

MY VISION — A HUMBLE APPEAL TO THE GOVERNMENT

AREA-WISE RESCUE, REHABILITATION & CAREGIVING CENTRES

"We may think that we are rescuing animals. In another sense, I believe animals also rescue us — by reminding us of compassion, alertness, coexistence and our responsibility toward life."

THE 50-METRE COMPASSION VISION — NO ABANDONED LIFE ON OUR ROADS

1. EXECUTIVE VISION

I envision a network of area-wise Rescue, Rehabilitation and Caregiving Centres for animals, developed at suitable locations and connected to local communities, veterinary services and public authorities. Government land may be considered only through lawful allotment, lease, permission or another authorised arrangement.

But the vision begins before a rescue centre. I want every locality to develop a culture of responsibility in which vulnerable street animals and birds are recognised, known and cared for by people living around them. The aim is not simply to rescue animals after suffering occurs, but to make abandonment increasingly difficult by creating nearby circles of compassionate community care.

The proposed "50-metre" idea is a **visionary target for discussion**, not an existing legal or government standard. It represents the spirit of extremely local responsibility; actual spacing should depend on local need, land availability, ecology, population, disaster risk and applicable regulations.

2. THE PHILOSOPHY

The foundation of this vision is **Compassion, Humanity, Service and Co-existence**. Rescue should not end with removing an animal from danger. It should continue through treatment, rehabilitation, safe shelter, responsible placement or return where appropriate, and prevention of future suffering.

Adopt your neighbourhood — not merely an animal. Community members may contribute food, water, treatment, rescue, transport, time, money, skills or safe care. Adoption in this vision means accepting responsibility for welfare; it does not necessarily mean bringing every animal into a private home.

I believe caring for animals can strengthen human society by cultivating responsibility, patience, empathy and respect for life. A street animal should not be treated as nobody's responsibility merely because it lives outside a home.

3. NO ABANDONED LIFE ON OUR ROADS

- **Identity:** local animals should be recognised and known.
- **Dignity:** they should be protected from cruelty, neglect and unnecessary harm.
- **Respect:** their lives and natural behaviour should be valued.
- **Care:** food, clean water and medical attention should be available when needed.
- **Freedom:** wherever safe and appropriate, animals should be able to live naturally rather than being confined unnecessarily.
- **Protection:** when injured, sick, abandoned or in danger, the community should respond.

4. THE LOCAL COMMUNITY LEGACY

The long-term aspiration is to create a distributed culture of truly dedicated people — families, individuals, volunteers, professionals and community groups — who stand together for vulnerable living beings. Different people can serve in different ways. Some may give time, some money, some veterinary expertise, some transport, food, land, administration or training.

The movement should not depend on a few heroic individuals alone. Its legacy should be a **community system of responsibility** that can continue across generations.

Our roads can be clean, beautiful and compassionate. Cleanliness should work together with responsible waste management, humane animal management, vaccination, sterilisation where appropriate, feeding discipline, veterinary care and community participation. Beauty should never require making vulnerable animals invisible.

5. ANIMALS, INSTINCT & DISASTER AWARENESS

Many animals can respond to environmental changes and unusual signals. This inspires my belief that animal behaviour deserves greater observation and scientific study.

I do not propose treating animals as guaranteed predictors of earthquakes, floods, cyclones or intruders. Their behaviour can instead be studied responsibly alongside established scientific and disaster-management systems. Hunger, fear, injury, exploitation and chronic stress may affect normal behaviour; humane living conditions are therefore essential if natural behaviour is to be observed and understood.

6. ANIMAL RESCUE CENTRE — EIGHT CORE WINGS

1. PLAYGROUND / SOCIALISATION	Controlled play, enrichment, socialisation, exercise and community activities; yoga, pranayam and meditation may be available for caregivers/community members.
2. SHELTER / RESTING AREA	Weather-protected sleeping and resting spaces with appropriate segregation by health status, species and temperament.
3. QUARANTINE HALL	Separate space for newly rescued, infectious-risk or observation cases with suitable hygiene and biosecurity.
4. MEDICAL EMERGENCY HALL	Veterinary examination, first-response care, emergency stabilisation and coordination with referral hospitals.
5. DINING / FEEDING HALL	Safe food preparation, storage, clean water and species-appropriate feeding with hygiene controls.
6. FUNCTION / COMMUNITY HALL	Campaigns, seminars, volunteer training, awareness programmes, ceremonies and responsible adoption/community events.
7. RESCUER / CAREGIVER / DOCTOR ROOM	Operational space for rescuers, caregivers, veterinarians and authorised staff to coordinate cases and records.
8. SECURE GREEN PERIMETER	Strong boundary and controlled entrance, with trees/green buffers where ecologically and legally suitable.

7. ESSENTIAL DESIGN PRINCIPLES

- **Safety:** strong fencing, controlled entrance/exit, fire safety and escape prevention.
- **Welfare:** adequate space, shade, ventilation, clean water, nutrition, hygiene and enrichment.
- **Medical connectivity:** dependable access to qualified veterinary care and transport for referrals.
- **Disaster resilience:** site selection should consider flood, cyclone, fire, drainage and evacuation risk.
- **Environmental responsibility:** protect river systems and use locally suitable trees and landscaping.
- **Transparency:** maintain records of rescue intake, treatment, vaccination, rehabilitation, placement, expenditure and donations.

8. AREA-WISE NETWORK

Local Community Care → Local Rescue Centre → Area Coordination → Veterinary Referral → Rehabilitation → Adoption / Return where appropriate

The strength of a distributed model is rapid local response. Smaller centres can connect to larger veterinary hospitals and specialised rehabilitation facilities rather than attempting every function at every location.

9. PARALLEL HUMANITARIAN CARE CENTRES

The same philosophy can be extended to vulnerable human beings. In suitable village–city transition areas, I envision Rescue, Rehabilitation and Caregiving Centres for abandoned children, unsupported older people, homeless people and other vulnerable persons — always through lawful, professional and safeguarding-compliant systems.

- **Safe accommodation** — dignified temporary accommodation and safeguarding.
- **Medical support** — first response and referral to qualified healthcare providers.
- **Dining & nutrition** — safe food, clean water and nutrition support.
- **Counselling & rehabilitation** — qualified social, psychological and rehabilitation support.
- **Education & skills** — learning and vocational pathways toward independence where appropriate.
- **Community hall** — awareness, training, counselling and community programmes.
- **Care team room** — coordination for authorised caregivers, social workers and doctors.
- **Green/recreation area** — safe outdoor space for exercise, reflection and constructive activities.

10. GOVERNANCE & OVERSIGHT

These centres should not become isolated personal shelters. They should operate within a transparent framework involving local administration, qualified veterinarians, recognised animal-welfare organisations, disaster-management bodies, social-welfare authorities, trained volunteers and community representatives.

Animal centres should work with competent animal-welfare, veterinary, municipal, environmental and land-use authorities. Humanitarian centres should involve appropriate child-protection, social-welfare, healthcare and local-government authorities according to the beneficiaries served.

Independent inspection, welfare audits, financial transparency, case records and public reporting should be encouraged to protect beneficiaries and public trust.

11. MY PERSONAL COMMITMENT

I see myself as a dedicated one-man force for the voiceless, but I do not see sustainable rescue as a one-person activity. The practical model is **personal dedication + trained caregivers + veterinarians + volunteers + community participation + transparent governance**.

My personal commitment is to encourage a culture in which compassion becomes organised action — where people do not merely feel sympathy for an injured, abandoned or hungry animal, but know what to do and have a local system through which they can act.

12. IMPLEMENTATION ROADMAP

PHASE 1 — PILOT AREA	Assess rescue demand, animal population, land suitability, veterinary access, disaster risk and community support.
PHASE 2 — LEGAL FRAMEWORK	Secure lawful land-use permission/allotment/lease and required approvals before construction.
PHASE 3 — CORE FACILITY	Establish boundary, controlled entrance, shelter, quarantine, emergency space, feeding area and caregiver facilities.
PHASE 4 — SOPs & OPERATIONS	Create procedures for intake, quarantine, treatment, feeding, sanitation, records, rehabilitation and emergencies.
PHASE 5 — COMMUNITY NETWORK	Train local rescuers and volunteers and establish veterinary/emergency referral links.
PHASE 6 — MEASURE OUTCOMES	Evaluate welfare, response time, rehabilitation, community impact and operating cost.
PHASE 7 — REPLICATE	Use evidence from the pilot to refine and expand the model to other areas.

13. THE LARGER PURPOSE

This vision is ultimately not only about constructing buildings. It is about converting compassion into an organised system of care. A rescue centre can provide safety; rehabilitation can provide recovery; community participation can provide continuity; education can create long-term change.

My hope is that India can demonstrate leadership through practical compassion — not merely by speaking about humanity, but by building systems that protect vulnerable life.

VISION STATEMENT

To build a compassionate, area-wise network of rescue, rehabilitation and caregiving centres that protects vulnerable animals, supports vulnerable human beings, strengthens community responsibility, and encourages a humane relationship between people, animals and nature.

NO ABANDONED LIFE. NO INVISIBLE LIFE. NO VOICELESS LIFE WITHOUT SOMEONE STANDING BESIDE IT.

Prepared as a personal vision and concept proposal by Satyabrata Das.

This document presents a conceptual framework for discussion. Land, environmental, veterinary, construction, safeguarding and other legal/regulatory requirements must be verified with competent authorities before implementation. The “50-metre” concept is a visionary principle for local responsibility, not a legal or government-prescribed standard.
